DETAILED ACTION

Allowable Subject Matter

Claims 1-31 are allowed.

The following is an examiner's statement of reasons for allowance:

The methods of determining a beat variability in a heart comprising determining an average relevance of the variability over a collection of beats using a non-linear statistics or weighting comparisons according to a likelihood that the comparisons are relevant to atrial fibrillation and identifying either atrial fibrillation or atrial flutter as claimed are not taught nor suggested by the prior art of record. Further, the feature of describing the variability in heart rate over a series of beats using the DRR(n) factor as claimed is not rendered obvious by the prior art of record.

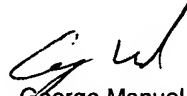

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Zhu et al '125 and Fischell et al '705 teach measuring heart rate variability; however, there lacks a suggestion to combine the teachings with non-linear statistics or weighting comparisons.
